

## CN LAB

### Dijkstra's Algorithm

1. min distance function

```
=> def minDistance (self, dist, sptSet):  
    min = sys.maxsize  
    for v in range (self.V):  
        if dist[v] < min and sptSet[v] == False:  
            min = dist[v]  
            min_index = v  
    return min_index
```

2. dijkstra's Algorithm

```
def dijkstra (self, src):  
    dist = [sys.maxsize] * self.V  
    dist[src] = 0  
    sptSet = [False] * self.V  
    Path = []  
    for _ in range (self.V):  
        Path.append([])  
        for fr in range (self.V):  
            u = self.minDistance (dist, sptSet)  
            sptSet[u] = True  
            for v in range (self.V):
```

Patel

```

if self.graph[u][v] > 0 and sptSet[v]
:: False and dist[v] > dist[u] + self.graph[u][v]:
    with open('dist.txt', 'w') as f:
        f.write(str(dist[v]) + "\n")
        dist[v] = dist[u] + self.graph[u][v]
        if u == src:
            Path[v].append(u)
        else:
            Path[v].append(u)
            Path[v].append(v)
    self.printTable(dist, src, path)

```

Eg:-
